

Aslan Wang

aslanwang187@gmail.com | github.com/Asyboi | devpost.com/aslanwang187 | linkedin.com/in/aslanwang | (516) 806-9318

EDUCATION

University of Illinois Urbana-Champaign

Expected May 2028

B.S. in Computer Science and Music

Relevant Coursework: Data Structures and Algorithms, Computer Systems, Discrete Structures, Software Design Lab

Awards: 7x Hackathon Winner (incl. YHack 2026, HackIllinois 2026, HooHack 2026, SpartaHack 2026)

TECHNICAL SKILLS

Languages: Python, C++, C, Java, JavaScript, TypeScript, Rust, SQL

Frameworks: FastAPI, Flask, Express, Node.js, Next.js, React, Vite, Hono, SQLite

Developer Tools: Git, AWS, Docker, Firebase, Cloudflare Workers, Vercel, Render, Railway, PostgreSQL

EXPERIENCE

Major League Hacking

July 2026 – Sept. 2026

AI Intern

New York, NY

- Built a GitHub API pipeline scoring MLH fellowship applicant repositories on commit-history patterns derived from 712 previously flagged applications, detecting first commit dominance, commit drift, and commit count
- Deployed the pipeline as a FastAPI webhook service on Railway, syncing scores through Twilio Segment into Salesforce, automating manual repo inspection for admissions staff on 1,000+ applications/cycle

Recost

Feb. 2026 – May 2026

Co-Founder & CTO

Champaign, IL

- Hit a Top 20 Product Hunt ranking and 130+ upvotes on launch by architecting an API cost observability SaaS on Cloudflare Workers + D1
- Flagged API cost waste categories such as batching, caching, concurrency, N+1 calls, and rate limiting across 6 programming languages by building a VS Code extension with AST-based scanners
- Attributed real-time per-call cost across 14 API providers and 25 provider endpoints by shipping Node and Python middleware SDKs that intercept fetch/http traffic

Screenz.ai

Feb. 2026 – Apr. 2026

Full-Stack Engineer Intern

Miami, FL (Remote)

- Reduced recruiter screening time by ~40% by building a candidate-scoring pipeline ranking 1,000+ applicants against job criteria for 100+ companies using React, Next.js, and PostgreSQL
- Developed fully automated AI-led interviews with no human moderation, leading to 6.5x faster time-to-hire, by integrating Claude and ElevenLabs models via REST and WebSocket APIs into candidate and recruiter workflow

PROJECTS

Bastion-Agent [GitHub] | *Python, SQLite, MCP*

- Compressed Python failure traces from ~8K to under 600 tokens by developing an agent-first error-observability library using decorators to capture exceptions, local state, and execution flow into SQLite
- Cut error identification from minutes of manual log reading to a single query by implementing an MCP server with 10 query tools letting coding agents diagnose failures via real-time error fingerprinting

Agentic Multilayer Platform for EMS Reports (Calyx) [Devpost] | *React, FastAPI, Claude/Gemini API*

- Built a multilayer AI orchestration platform that automates the process of writing patient care and quality improvement reports for EMTs and hospital administrators
- Reached 90%+ field accuracy against EMT-written ground truth across 40+ test incidents by routing body footage, radio calls, and dispatch records to specialist vision, speech, and text models under a supervising agent

Eco Router (Yale YHack 2026 Winner) [Devpost] | *Optuna, FastAPI, Rust*

- Identified Pareto-optimal inference configurations reducing carbon intensity by 2.9× by benchmarking 60+ Qwen model runs on NVIDIA DGX Spark across latency, quality, and SCI using Optuna Bayesian optimization
- Extrapolated software carbon intensity for models up to 500B parameters by fitting a scaling-law regression to per-token emissions measured across Qwen model sizes
- Won YHack 2026's Built With Zed track by shipping a Zed IDE extension built in Rust routing developers to the greenest model meeting their quality threshold, supported by a FastAPI + SQLite Pareto frontier store
